## KEY INSIGHTS

- **Strong Territory Revenue Concentration**

OH and PA generate the highest annual sales and total sales, indicating strong customer demand and market penetration within these territories.

- **Positive Relationship Between Selling Area and Sales**

The scatter analysis reveals a strong positive correlation (79%) between selling area and sales performance, suggesting that larger retail spaces generally contribute to higher sales volumes.

- **Revenue Contribution is Uneven Across Territories**

A significant proportion of total revenue comes from a limited number of territories, while regions such as DE and TN contribute considerably less to overall sales performance.

- **Competitive Territories Still Generate Significant Revenue**

Stores located in competitive territories account for approximately 23% of total sales, indicating that competition impacts performance but does not eliminate revenue potential.

- **Chain Performance Dominance**

Fashions Direct contributes nearly 64% of annual sales, significantly outperforming Lindseys and serving as the brand's primary revenue driver.

- **Store Performance Concentration**

Top-performing cities such as Laurel and Charleston consistently outperform other locations, indicating stronger local market demand and operational effectiveness.

## BUSINESS RECOMMENDATIONS

- **Expansion in High-Performing Territories**

Increase investment, inventory allocation, and marketing efforts in top-performing territories such as OH and PA to maximize revenue opportunities.

- **Optimize Store Size Strategy**

Since sales performance shows a strong positive relationship with selling area, the company should consider expanding high-performing stores or prioritizing larger retail spaces in future expansion plans.

- **Improve Underperforming Markets**

Conduct market analysis and operational reviews in low-performing territories such as DE and TN to identify challenges affecting customer engagement and sales performance.

- **Strengthening Competitive Market Strategy**

Since stores in competitive territories still contribute meaningful revenue, the company should improve differentiation through customer experience, promotions, and product exclusivity rather than avoiding competitive markets entirely.

- **Reduce Revenue Dependence on One Chain**

The business should strengthen the performance of smaller store chains to reduce overreliance on Fashions Direct and improve long-term business stability.

- **Replicate Success Patterns**

Analyze the operational strategies of top-performing stores and apply successful merchandising, staffing, and customer engagement approaches to weaker-performing locations.
